[Sedimentary rock Energy Education](#)

Sedimentary rock is rock that is formed over a period of time as a result of accumulation of sediment in one area. There are three main types of sedimentary rocks

[Sedimentary rock Wikipedia](#)

Sedimentary rocks are types of rock that are formed by the deposition and subsequent cementation of that material at the Earth's surface and within bodies of water. Sedimentation is the collective name for processes that cause mineral or organic particles to settle in place. The particles that form a sedimentary rock by accumulating are called sediment. Before being deposited, the sediment was formed by weathering and erosion from the source area, and then transported to the place of deposition
